

Disasters

TOTALMOBILE - Introduction

TotalMobile is a mobile working system that saves you time, money, gas and paperwork.

It's designed for any business or organization with people who spend some or all of their time on the road.

Using the appropriate devices they can:

- Schedule appointments and report when they have been kept
- Capture images to show that a job has been done
- Order new supplies
- Fill out official paperwork and file it without returning to headquarters
- Issue invoices when the job's done.

But that's only a tiny snapshot of TotalMobile's capabilities. In a nutshell, it can revolutionize the way you work, increasing profits and revenue and improving efficiency.

TOTALMOBILE

DISASTERS

We hope that you will never have to deal with a disaster. But if you do, TotalMobile can make all the difference to the efficiency of your response.

We've seen disaster management staff in the wake of a tornado armed with nothing more than a truck and a clipboard full of incident reporting forms.

TotalMobile is the 21st century way of doing things.

Your people at the scene can take advantage of a whole range of reporting options. Using a ruggedized PDA or Tablet, they can assess damage, capture information in text or pictures, fill out forms, and provide impact scoring information in real time. They can keep track of displaced people and damaged buildings. The information they provide can also be shared with other emergency services or the public.

Too often, disaster or emergency responses are hampered by a lack of joined-up information, available to all the agencies involved. TotalMobile solves that problem with the touch of a button.
